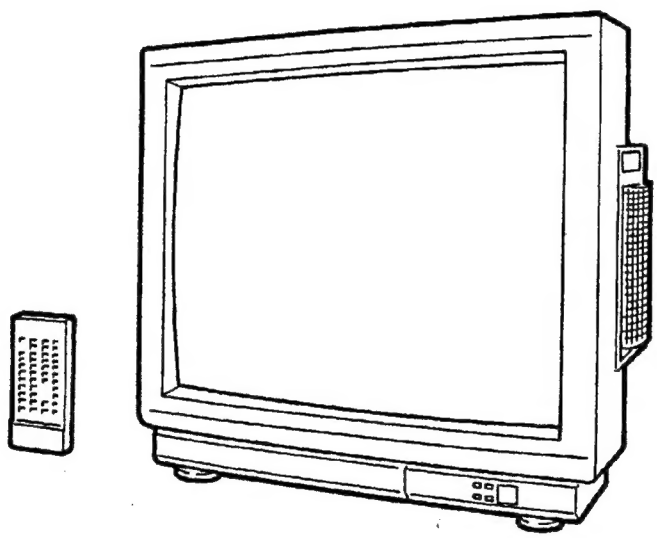
SERVICE MANUAL

73cm COLOUR TV

AV-S290M

BASIC CHASSIS
BY-Ⅰ



CONTENTS

Khan 643

No.50245
Jun.1989

SPECIFICATIONS

Item	Content
Dimension	68.5cm (W) × 48.3cm (D) × 58.4cm (H)
Weight	39.8kg
TV RF System	CCIR (B, G, D, K, K1, I & M)
Colour System	PAL/SECAM/NTSC
Receiving Channel & Frequency	
VHF Ch. (V_L)	47MHz ~ 99MHz
(V_H)	174MHz ~ 230MHz
UHF Ch. (U)	470MHz ~ 862MHz
Intermediate Frequency	
V. IF Carrier	38.9MHz
S. IF Carrier	33.4MHz (5.5MHz), 32.4MHz (6.5MHz)
	34.4MHz (4.5MHz), 32.9MHz (6.0MHz)
Colour Sub Carrier	PAL (4.43MHz), SECAM (4.40625MHz, 4.25MHz)
	NTSC (3.58MHz,4.43MHz)
ANT Input Impedance	75Ω Unbalanced
Power Input	
Rated Voltage	120V to 240V AC50Hz / 60Hz
Operating Voltage	90V to 260V ~ 50Hz / 60Hz
Power Consumption	160W (Max.)/135W (Avg.)
Picture Tube	73cm In-Line Type (Flat Square Tube)
Viewable Picture Size	54.1cm (W) × 40.6cm (H)
High Voltage	31kV ± 1kV (at zero beam current)
Speaker	8 × 12cm Oval Type 8Ω × 2
Audio Power Output	5W + 5W
Audio Music Power	7W + 7W
Video (1, 2) Input	1Vp-p, 75Ω (BNC Connector)
Audio (1, 2) Input	390mV rms (−6dBs), High Impedance (RCA Pinjack)
Video Line Output	1Vp-p, 75Ω (BNC Connector)
Audio Line Output	300mV rms (−8dBs), Low Impedance (400Hz, 100% modu)
	(RCA Pinjack)
S-VHS Video Input (4 Pin)	Y: 1Vp-p Positive, 75Ω (Negative sync. provided)
	C: 0.3Vp-p (Burst signal), 75Ω
S-VHS Audio Input	390mV rms (−6dBs), High Impedance (RCA Pinjack)
Tube	1
IC	18 (In TV), 1 (In REMOCON)
Transistor	112 (In TV), 2 (In REMOCON)

Design & specifications subject to change without notice.

SAFETY PRECAUTIONS

1. The design of this product contains special hardware, many circuits and components specially for safety purposes.
   For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. **Electrical components having such features are identified by shading on the schematics and by (⚠)on the parts list in Service manual.** The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual many create shock, fire, or other hazards.
4. **Don't short between the LIVE side ground and NEUTRAL side grounding or EARTH side ground when repairing.**
   Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (⊥) side GND, the NEUTRAL(⏚) side GND and EARTH (⏚) side GND. Don't short between the LIVE side GND and NEUTRAL side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND or EARTH side GND at the same time.
   If above note will not be kept, a fuse or any parts will be broken.
5. If any repair has been made to the chassis, it is recommended that the B1 setting should be checked or adjusted (See ADJUSTMENT OF B_1 POWER SUPPLY).
6. The high voltage applied to the picture tube must conform with that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approvided by the manufacturer of the complete product.
7. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a 10kΩ 2W resistor to the anode button.
8. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred, those components that indicate evidence of overheating should be replaced. Always use the manufacturer's replacement components.
9. **Isolation Check**
   (Safety for Electrical Shock Hazard)
   After re-assembling the product, always perform an isolation check on the exposed metal parts of the cabinet (antenna terminals, video/audio input and output terminals, Control knobs, metal cabinet, screwheads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

(1) **Dielectric Strength Test**
The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 3000V AC (r.m.s.) for a period of one second.
(. . . . Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)
This method of test requires a test equipment not generally found in the service trade.

(2) **Leakage Current Check**
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.) Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.).

• Alternate Check Method
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500Ω 10W resistor paralleled by a 0.15μF AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement, Any voltage measured must not exceed 0.35V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.).

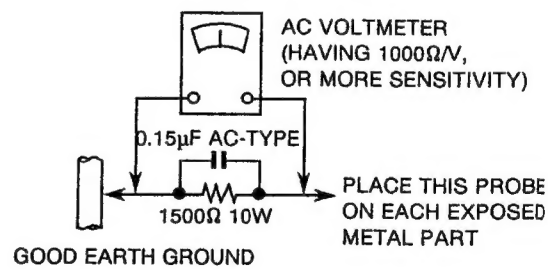


Fig.A

FEATURES

- Sub power supply circuit has been eliminated by using the main switch circuit of power-source circuit to supply power to 12 V power source for microcomputer and −30 V power source for memory.
- V. HOLD and H. HOLD are deleted as a result of employment of IC with built-in deflection circuit that adopts the count-down method for V./H. OSC.
- Newly incorporated is an off-timer with functions of max. 2-hour time setting in 30-min. units and of time remaining indication.
- An on-timer also offers max. 24-hour time setting in 1-hour units plus time remaining indication function.
- Multifunctional remote control system enables control Via the hand held remote commander, of many of the receiver's functions.
- 4-Pin S-VIDEO (separated video) input terminal for direct connection to a Super VHS video recorder, taking full advantage of the new, superior-quality Super VHS video format.

CHANNEL MEMORY PRESETTING

1. Press PRESET button to "ON" to engage the Channel Preset mode.
2. Set the colour system button to P/S AUTO, SECAM or NTSC as required.
3. Select the Channel Position number from "0" to "29" using CH (−/+) buttons on the front panel or Numerical Keypad on the Remote Control.
4. Tune to the broadcast station to be stored on the selected Channel Position.
   (A) Using TUNING (−/+) buttons.
   - Press the TUNING (−/+) buttons to manually tune to a broadcast station. Pressing the "+" button advances to higher frequency stations, and "−" to lower-frequency stations.
5. Press MEMORY button to store the station in memory (Channel Position). The Channel Position number blinks once to show that the station has been memorized in the Channel Position.
6. Repeat steps 2. through 5. to store broadcast stations for up to 30 Channel Positions.
7. Press the PRESET button to "OFF" to disengage the Channel Preset mode.

OPERABLE VTRs

With the supplied Remote control unit, some of the functions of the following VTRs can be remotely controlled.
Before start operation, be sure to turn the power of the VTR on.
For detailed operation, refer to the VTR instruction Book.
Note: Place the VTR so that it is within the operation range of the Remote control unit.
: Suffix of each model designate specific areas and specifications.

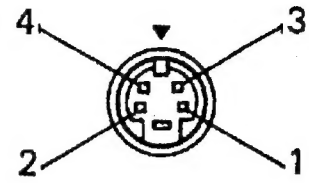
PIN ASSIGNMENT



Pin No.	Signal
1	GND
2	GND
3	Y (luminance)/1 Vp-p 75 Ω
4	C (chrominance)/0.3 Vp-p (burst level), 75 Ω

- Connecting to an S-VHS VTR (for playback)
This TV set is equipped to accept the separated Y (luminance) and C (chrominance) video signals, conforming to an S-VHS (Super VHS) Euro System, ideal for connection of an S-VHS VTR.

1. Connect the VTR's S-VIDEO OUT connector (4-pin) to TV set's S-VIDEO connector (4-pin).
2. Connect the VTR's AUDIO OUT connectors to the TV set's S-AUDIO connectors while making sure that the left and right channels are correctly connected.
3. Press the VIDEO button on the Remote Control or the TV/VIDEO button on the front panel to engage the VIDEO mode.
4. Set the colour system button to either P/S AUTO or SECAM S-VHS VTR as required.
5. Engage the S-VHS VTR's playback mode.

SPECIFIC SERVICE INSTRUCTIONS

DISASSEMBLY PROCEDURE

REMOVING THE REAR COVER

1. Unplug the power supply cord and remove the eighteen screws marked Ⓐ shown in Fig. A.

* When reinstalling the rear cover, carefully push it inward after inserting the main PC board into the rear cover groove.

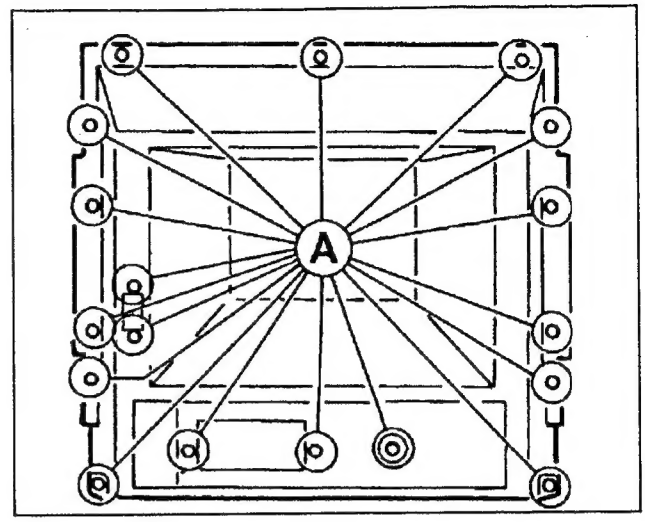


Fig. A

REMOVING THE LINE FILTER & RECT PC BOARD

* After removing the rear cover,

1. Remove the two screws marked Ⓐ shown in Fig. B.
2. Then, while pressing the claw marked Ⓑ shown in Fig. B, remove the LINE FILTER & RECT PC BOARD by sliding it in the arrow direction (upward) marked Ⓒ.

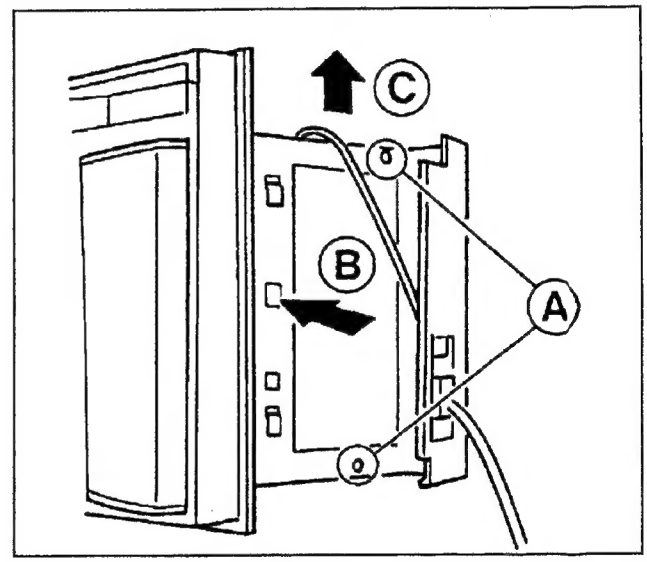

Fig. B

REMOVING THE SPEAKER GRILLE

* After removing the rear cover,

1. As shown in Fig. C, after removing the claw marked Ⓐ by pressing it in the arrow mark (Ⓐ / ⬇), remove the SPEAKER GRILLE by withdrawing it backward.
   (In the same manner as per the right SPEAKER GRILLE, the left one can also be removed.)

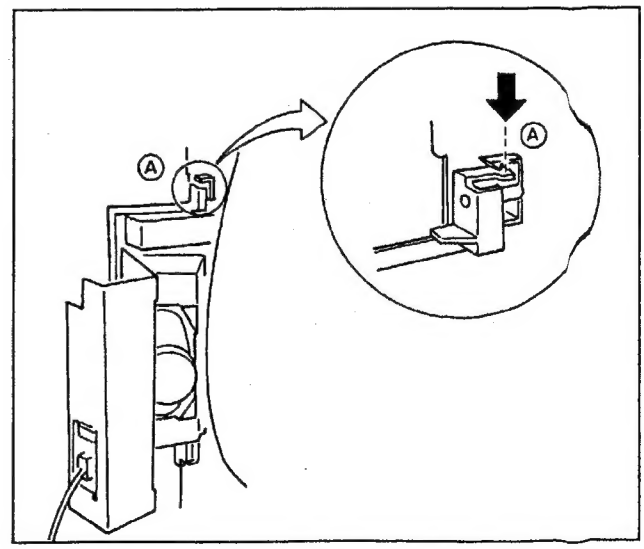

Fig. C

REMOVING THE CHASSIS

* After removing the rear cover,

1. As shown in Fig. D, hold the CHASSI from both sides (➡ ⬅) with both hands and, while raising it upward, remove the CHASSI by withdrawing it backward.
   (If necessary, take off the wire clamp and connectors, etc.)

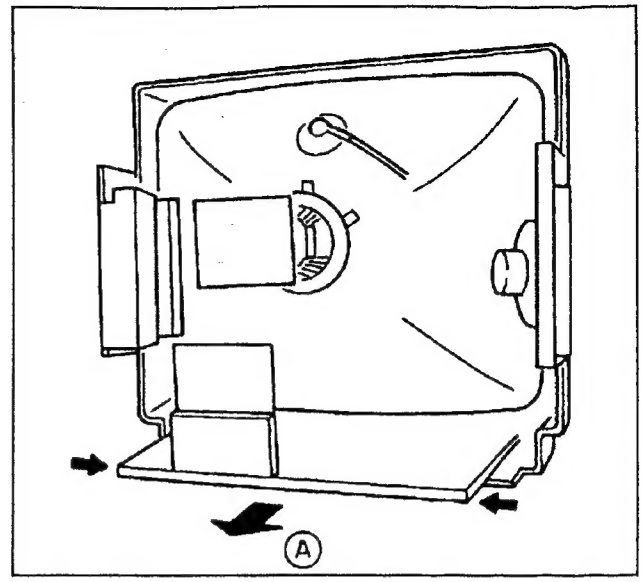

Fig. D

REMOVING THE AV TERMINAL

* After removing the rear cover,

1. As shown in Fig. E, while expanding the claw of the AV TERMINAL's legs in the arrow directions (Ⓐ /⬅ ➡), remove the AV TERMINAL by raising it upward (Ⓑ / ⬆).

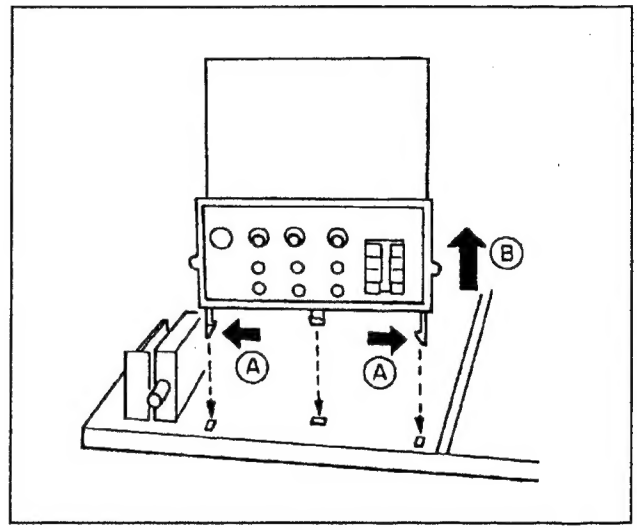

Fig. E

AN EXAMPLE OF PLACEMENT FOR SERVICE

1. As shown in Fig. F, place the unit for service.
2. When the chassis, sub P.C board, etc, have been removed, the wire clamp, connector, earth wire, etc, which were also detached together must be reattached to their original places in order to make preparations for service.
3. While taking care that there is no short circuit with the conductor section, etc., place the unit.
   Insulate the unit with a cardbord, or the like, if necessary.
4. After making sure that there is no short circuit and other obstructive matters with the unit, turn on electricity for service.

* When conducting a check with power supplied, be sure to confirm that the CRT earth wire is connected to the CRT socket board and the CHASSIS.

WIRE CLAMPING AND CABLE TIES

1. Be sure to clamp the wire.
2. Never remove the cable tie used for tying the wires together. Should it be inadvertently removed, be sure to tie the wires with a new cable tie.

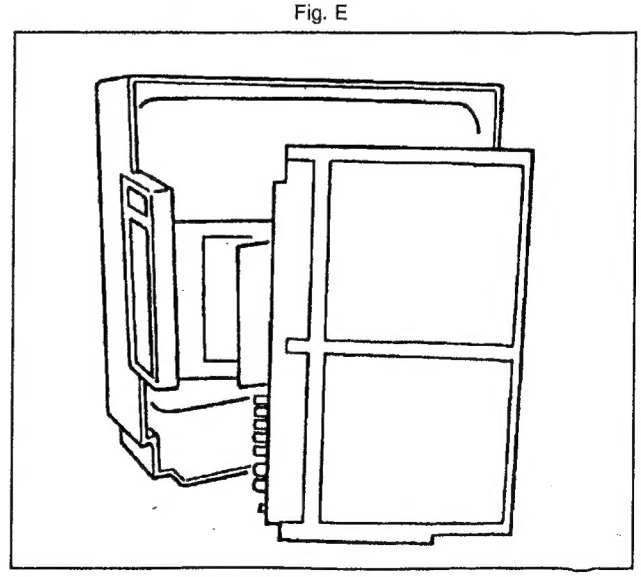

Fig. F

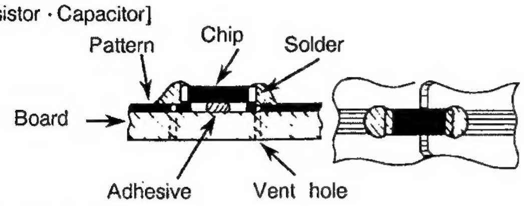
REPLACEMENT OF CHIP COMPONENTS

- **CHIPS ARE NOT USED ON CERTAIN MODELS. REFER TO THE DESCRIPTIONS ON THIS PAGE ONLY WHEN WORKING ON MODELS ON WHICH CHIPS ARE EMPLOYED.**
  Replacement of the chip on printed circuit board can be performed easily as follows.

1 **When mounted**

[Resistor · Capacitor]

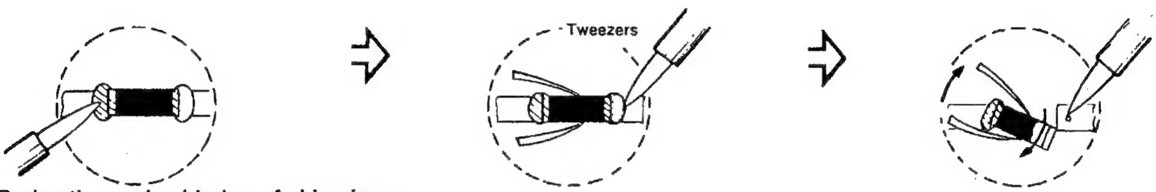


2 **Removal of the chip**

(1) Remove either of the soldered contacts.

(2) Hold the chip with tweezers and remove the other contact.

(3) Work the chip free from the adhesive with tweezers.

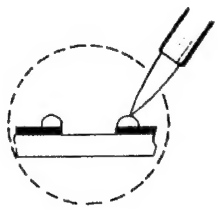


3 **Preheating and soldering of chip pieces**

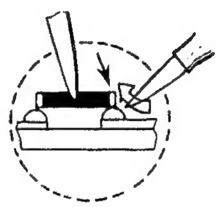
Be sure to preheat chip pieces (except the transistor) especially the capacitor before soldering with hot air, about 150°C (hair dryer or such can be used) for about 2 minutes. Then, immediately solder with an iron of about 30W.

4 **Replacing the chip pieces**

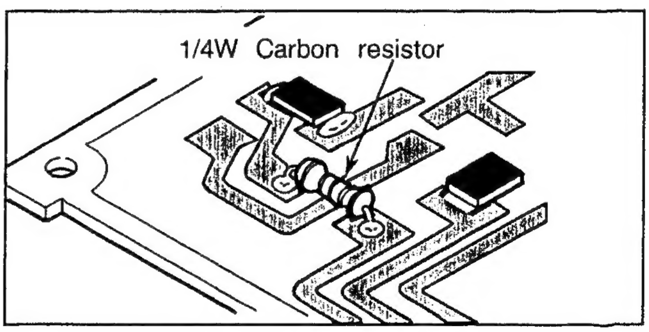
(1) Apply the solder to the board first.



(2) Hold the chip with tweezers and solder it in place, hold the iron at a 45° angle when soldering.

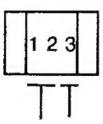


- Discrete parts can be substitutionally mounted as shown in the figure on the right.
  Mounting is also possible by passing the wires from the board front side (parts side) through the chip soldering hole (vent hole of registration part).
  Substitute parts are as follows.
  - Chip Metal Glaze Resistor
    →Carbon Resistor 1/4W ±5%
  - Chip Ceramic Capacitor
    →Ceramic Capacitor 50V ±5%



- Decoding of chip parts constant terms

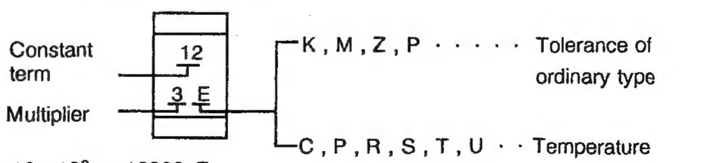
<Chip Metal Glaze Resistor>



Constant term Multiplier

12×10³ = 12000Ω
= 12kΩ

<Chip Ceramic Capacitor>



12×10³ = 12000pF
= 0.012μF

SERVICE ADJUSTMENT

TOOLS AND FIXTURES FOR ADJUSTMENT

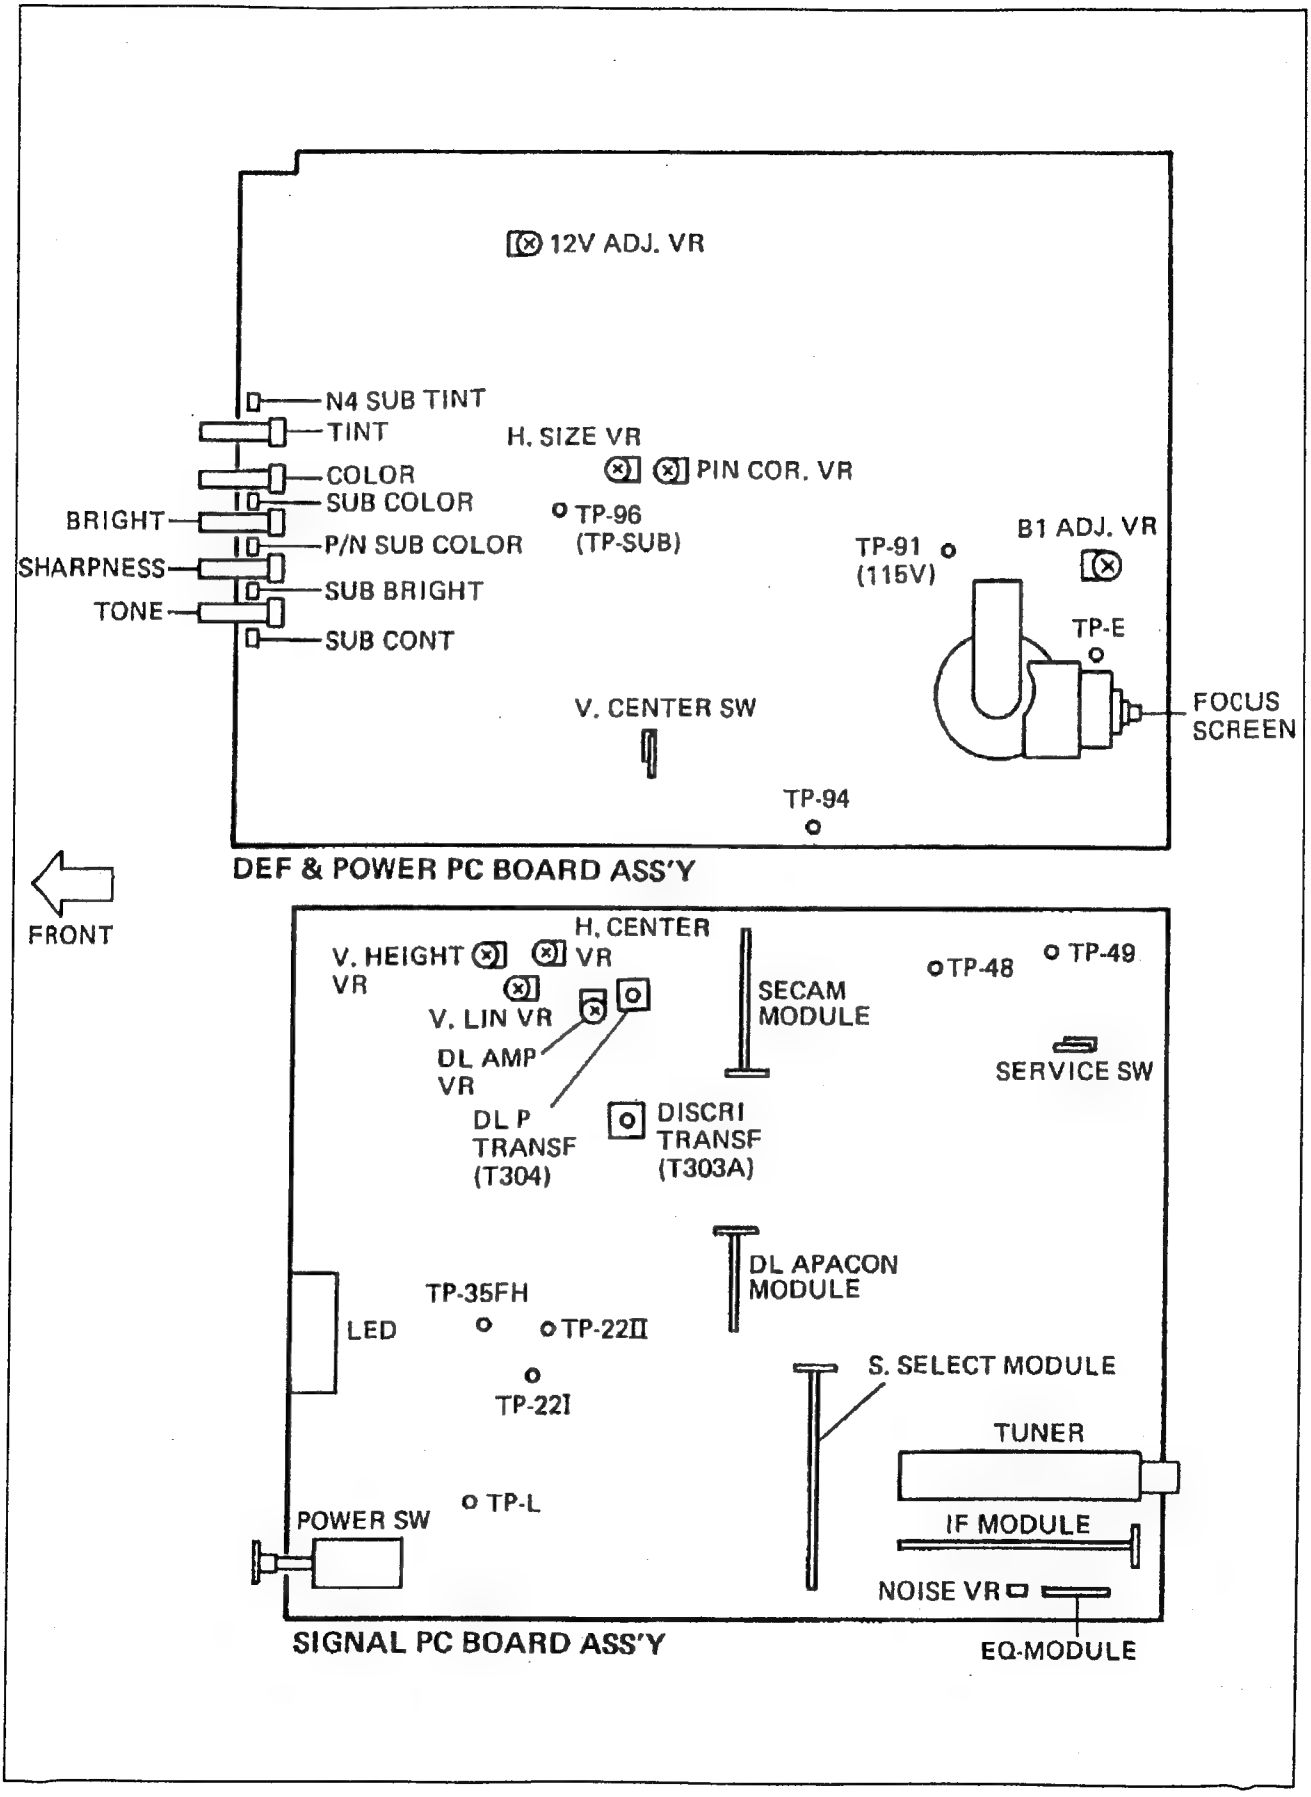
ADJUSTMENT LOCATION-(2)



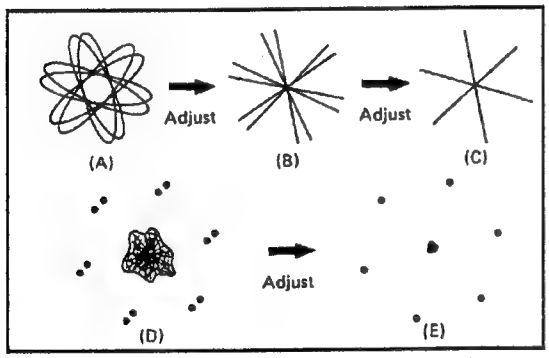
ADJUSTMENT

DEF & POWER CIRCUIT

Item	Measuring instrument	Test point	Adjustment part	Description
B1 POWER SUPPLY	DC Voltmeter	TP-91	B1 ADJ. VR	Connect a tester to TP-91 and TP-E (⏚) to check that the voltage is DC 115V. * The tester must have an internal resistance of 20kΩ / V or above.
SUB POWER VOLTAGE	DC Voltmeter	TP-96	12 V ADJ. VR	Adjust the 12 V ADJ VR to obtain 12 V DC between TP-96 (+ side of C618) and TP-E (⏚).
SUB BRIGHT & SUB CONTRAST			SUB BRIGHT SUB CONTRAST	Obtain optimum pictures by adjusting SUB BRIGHT VR & SUB CONTRAST VR. * Avoid excessive brightness.
SUB COLOUR & PAL/NTSC SUB COLOUR			SUB COLOUR VR PAL/NTSC SUB COLOUR VR	1. Receive a SECAM (System SW: SECAM) colour bar signal. 2. Adjust the SUB COLOUR VR to obtain natural colour density. 3. Adjust the colour control knob to obtain natural colour density. 4. Receive a PAL (System SW: AUTO) colour bar signal. 5. Adjust the PAL/NTSC SUB COLOUR VR unitl natural colour density is obtained.
N_4 SUB TINT (Only NTSC)			N_4 SUB TINT VR	1. Receive an NTSC (3.58 MHz) colour bar signal. (System SW: 3.58) 2. Adjust COLOUR and TINT knobs to obtain natural colour density. 3. Receive an NTSC (4.43 MHz) colour bar signal. (System SW: 4.43) 4. Adjust the N_4 SUB TINT VR until natural tint is obtained.
H SIZE & PIN CORRECTION			PIN CORRECTION VR H SIZE VR	1. Adjust the PIN CORRECTION VR to obtain the least deformation of the screen. 2. Adjust the H SIZE VR to move the screen horizontally and obtain the optimum screen with the whole image.
V CENTER			V CENTER SWITCH	The screen can be scrolled upward or downward by changing over the V. CENTER switch.
FOCUS			FOCUS VR	1. Adjust the FOCUS VR to obtain clear pictures. 2. Check that pictures have been adjusted to optimum appearance in both central and peripheral areas of the screen.

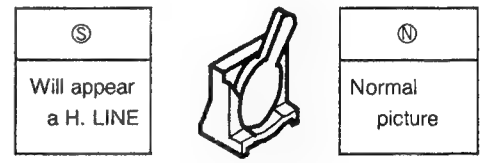
SIGNAL CIRCUIT

Item	Measuring instrument	Test point	Adjustment part	Description
NOISE (RF AGC)			NOISE VR	1. Turn the NOISE VR fully counter clockwise (or clockwise) so that noise is synchronized with the pictures. 2. Then slowly turn the NOISE VR clockwise (or counter clockwise) and stop it when noise disappears. 3. Change the channel, and check that no trouble is encountered. * This adjustment should be made when noise is annoying, when such symptons are detected as stripe-pattern interference in weak field areas, inter modulation noise in strong field areas, and horizontal strethcing of pictures.
CHROMA CIRCUIT	· Oscilloscope · Pattern Generator (PAL)	TP-48 (Y-axis) TP-49 (X-axis)	DL AMP VR DL P TRANSF. DISCRI TRANSF.	· PAL 1. Receive a PAL colour bar signal and set the oscilloscope at the X-Y mode and then connect CH-1 (X-axis) to TP-49 and CH-2 (Y-axis) to TP-48 respectively. 2. Short the C318 capacitor with a jumper wire and connect pin ㉔ and ㉘ of IC201 with 5.6kΩ resistor. See Lissajous' Fig. (A). 3. Adjust the PAL/NTSC SUB COLOUR VR so that the figure is not saturated. 4. Adjust the DL AMP VR so that the figure is altered to (B) from (A). 5. Adjust the DL P TRANSF (T304) so that the figure is altered to (C) from (B). 6. Repeat adjustments 4. and 5. more than twice. 7. Remove the shorted jumper wire and 5.6kΩ resistor from pin ㉔ and pin ㉘ of IC201. 8. Then adjust the DISCRI TRANSF (T303A: Burst cleaning) so that the figure is minimized to (E) from (D).
V. HEIGHT & V. LINEARITY			V. HEIGHT VR V. LINEARITY VR	1. Set colour bar signal to crosshatch or a pattern with which symmetry can be checked. 2. Reduce the vertical size with the V. HEIGHT VR. 3. Adjust the vertical symmetry with the V. LINEARITY VR. 4. Readjust the V. HEIGHT so that the picture expands to normal size. * Pictures that enable vertical symmetry to be checked should be circles and crosshatches.



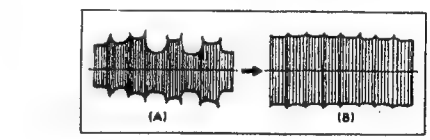
SIGNAL CIRCUIT

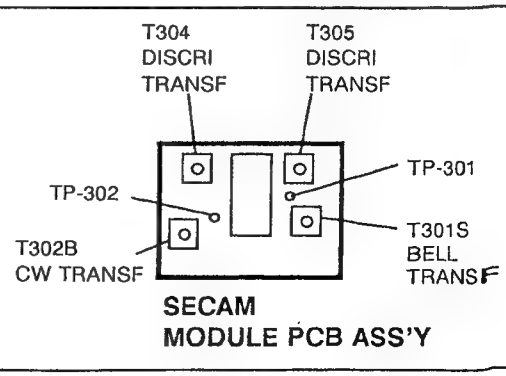
Item	Measuring instrument	Test point	Adjustment part	Description
H CENTER			H CENTER VR	1. The screen can be scrolled leftward or rightward by adjusting the H. CENTER VR.
HORIZONTAL LINE			SERVICE SWITCH	1. Turning the SERVICE SWITCH from the N side to the S side will bring the horizontal line display to the screen.



SECAM MODULE CIRCUIT

Item	Measuring instrument	Test point	Adjustment part	Description
CHROMA CIRCUIT	Oscilloscope DC Voltmeter	TP-301 TP-302	BELL TRANSF. (T301S) CW TRANSF (T302B) DISCRI TRANSF (T304/T305)	· SECAM 1. Receive a SECAM colour bar signal (System SW: SECAM). 2. Connect an oscilloscope to pin ⑮ (or TP-301) of IC301. 3. Adjust the BELL TRANSF (T301S) for flat waveform as altered to figure (B) from (A). 4. Connect a voltmeter to pin ⑫ (or TP-302) of IC301. 5. Adjust CW TRANSF (T302B) for minimum DC voltage. 6. Adjust the DISCRI TRANSF (T304 & T305) until colours are eliminated from the black-and white (or white) sections of colour bars on the screen.





SECAM MODULE PCB ASS'Y

PURITY, CONVERGENCE AND WHITE BALANCE

* The locations of SERVICE SWITCH, SCREEN VR, CUT-OFF VR and DRIVE VR are described in the ALIGNMENT LOCATION of SERVICE ADJUSTMENT or the SCHEMATIC DIAGRAM.

PICTURE TUBE

The picture tube is a precision in-line gun type. For this picture tube, dynamic convergence is carried out by a precision deflection yoke which eliminated the use of convergence yoke and convergence circuit. The adjustment of picture tube is therefore made easier as only the adjustment of static convergence by using a magnetic is enough. The deflection yoke and purity/convergency magnets assembly has been set at the factory and requires no field adjustments. However, should the assembly be accidentally jarred or tampered with, some or all adjustments may by necessary.

COLOR PURITY & VERTICAL CENTER

Loosen yoke retaining screw (Fig. B-1) . With a sharp knife cut between the picture tube and the wedge. Remove wedges completely and clean off dried adhesive from the picture tube. PAINT is used to lock the tabs of the purity/convergence magnet assembly in place (Fig. B-1) . The paint must be removed with the end of a screwdriver before any adjustments are attempted.

(As to models equipped with a magnet locking ring, beforehand loosen it.)

1. Select no signal UHF channel. (or Display a monochrome pattern)
2. Let the purity tabs come in line horizontally as is shown in Fig. B-2. A long tab should be in the same direction as the other short tab.
3. Move the yoke slowly backward.
4. Turn the GREEN CUT-OFF VR to maximum and the RED and BLUE CUT-OFF VRs to minimum. Then adjust the SCREEN VR so that the green band can be seen best. (Fig. B-3)
5. Rotate the two tabs in the opposite directions and with them kept at an angle, together in either direction so that the green band is centered on the picture tube.
6. Check the vertical center position by displaying a horizontal line. (Select the CUT-OFF SERVICE SWITCH from N to S and a HORIZONTAL LINE will appear.) Unless correct, bring it to the nearest center by rotating the two tabs, kept at an angle, together in either direction. (Fig. B-4)
7. Repeat steps 5 and 6 alternately until the green band and the vertical center come to the center.
8. Move the yoke slowly towards the bell of the tube so that the whole surface of the picture tube is filled with a green pure raster.
9. Turning RED or BLUE CUT-OFF VR to maximum and GREEN CUT-OFF VR to minimum, make sure of a red or blue pure raster.
10. Secure yoke retaining screw (do not install wedges at this time) .

(As to models equipped with a magnet locking ring, secure it and keep six magnets from moving even if it is touched slightly.)

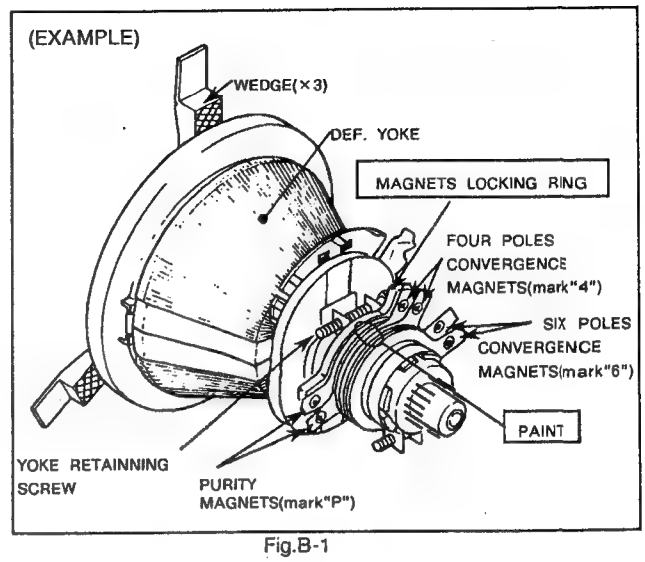


Fig.B-1

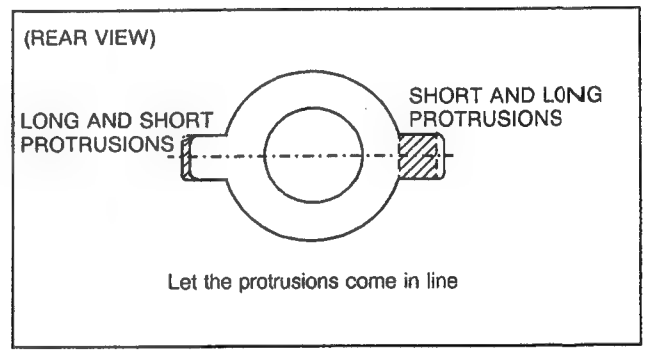

Fig.B-2

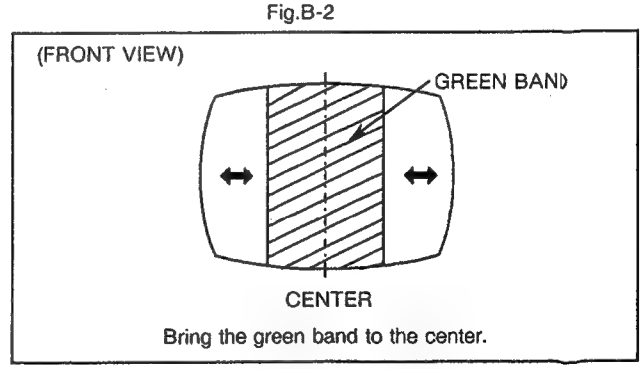

Fig.B-3

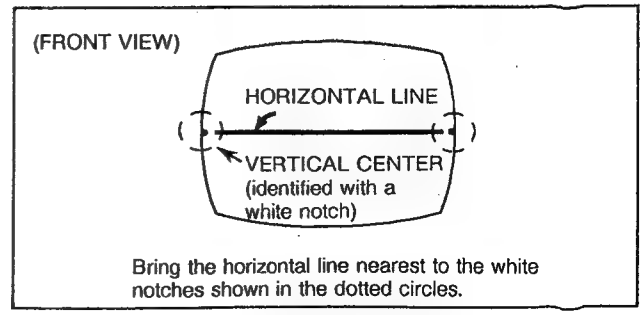

Fig.B-4

STATIC CONVERGENCE & DYNAMIC CONVERGENCE

1. Connect a crosshatch generator to the input terminals and adjust BRIGHTNESS and CONTRAST control for a distinct pattern.
2. Adjust the convergence around the edges of the picture tube by tilting the yoke, up-down and left-right, and temporarily install one wedge at the top of the yoke. (Fig. B-7, 8, 9)
3. Rotate the front pair of tabs (four pole convergence magnet) as a unit to minimize the separation of the red and blue lines around the center of the screen. To adjust the convergence of red and blue, vary the angle between the tabs (Fig. B-5)
4. Rotate the rear pair of tabs (six pole convergence magnets) as a unit to minimize the separation of the magenta (R/B) and green lines. (Fig. B-6)
5. Adjust the spacing of the rear tabs to converge the magenta and green lines.
6. Apply paint to fix six magnets.
   (As to models equipped with a magnet locking ring, tighten it.)
7. Remove the wedge installed temporarily on the yoke.
8. Tilting the angle of the yoke up, down and sideways, and adjust the yoke so as to obtain the circumference convergence. (Fig. B-8, 9)
9. Insert wedges to the position as shown in Fig. B-10 to obtain the best circumference convergence.
10. Wedge has a backing of double sided adhesive tape. Therefor, tear off one side of adhesive tape, and fix the wedges.
11. White balance adjustment (Black & White tracking) can now be performed.

WHITE BALANCE ADJUSTMENT

(Black and White Tracking)

1. Display a monochrome pattern.
2. Set the RED and GREEN DRIVE VRs for their mechanical center.
3. Turn the RED, GREEN and BLUE CUT-OFF VRs and the SCREEN VR fully counterclockwise.
4. Display a horizontal line. (Select the CUT-OFF SERVICE SWITCH from N to S and a HORIZONTAL LINE will appear.)
5. Turn SCREEN VR slowly clockwise until a very faint horizontal line appears.
6. Turn the CUT-OFF VR of the color which has appeared first, clockwise by about 10°and then adjust the SCREEN VR again so that the color may shine faintly.
7. Turn the other color CUT-OFF VRs slowly clockwise until a reasonable white line appears.
8. Return the monochrome pattern. (When returning a monochrome pattern select the CUT-OFF SERVICE SWITCH from S to N and a monochrome pattern will appear.)
9. Adjust the RED and GREEN DRIVE VRs for best white highlights.

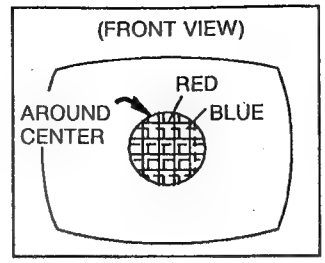

Fig.B-5

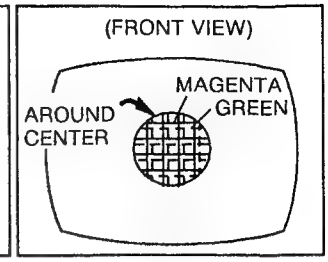

Fig.B-6

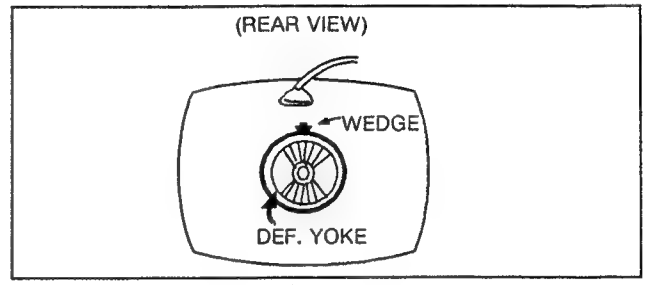

Fig.B-7

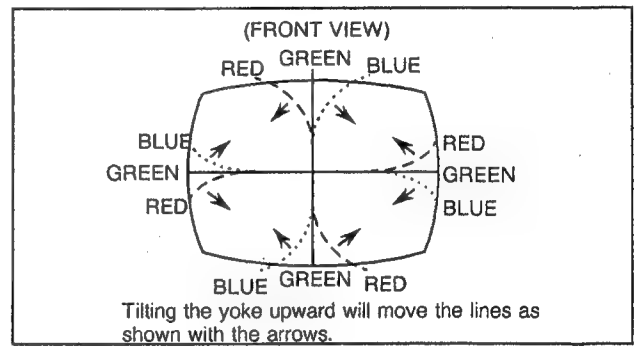
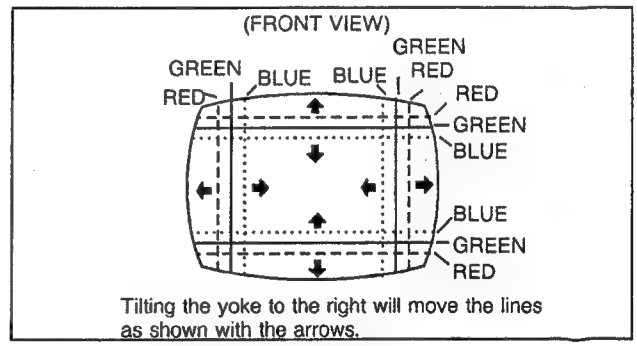


Tilting the yoke upward will move the lines as shown with the arrows.

Fig.B-8



Tilting the yoke to the right will move the lines as shown with the arrows.

Fig.B-10

PARTS LIST

CAUTION

- The parts marked ⚠ are very important for the safety. When replacing these parts, be sure to use specified ones to secure the safety and performance.
- The module circuit board is supplied together with the assembly, but the parts which do not have the drawing in this Parts List, P. C. Board Ass'y and the Parts No. columns of which are filled with lines —— . will not be supplied.
- As a rule, the resistors and capacitors which are indicated as shown in (NOTE 2) "HOW TO EXPRESS PARTS NUMBERS OF STANDARD PARTS" are not shown in the list of the parts on the board.
  When ordering the service parts, confirm the resistance/rated power, capacitance/rated voltage, and type of the parts, then order by the part No. indicated according to (NOTE 2).

(NOTE 1) ABBREVIATIONS OF RESISTORS, CAPACITORS AND TOLERANCES

RESISTORS		CAPACITORS	
C R	Carbon Resistor	C CAP.	Ceramic Capacitor
F R	Fusible Resistor	E CAP.	Electrolytic Capacitor

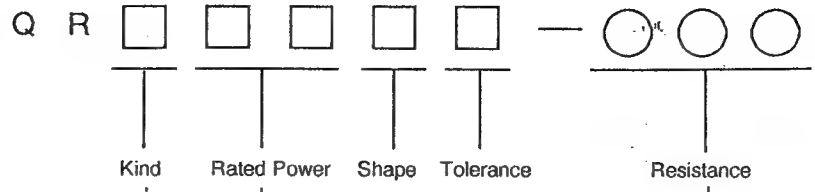
(NOTE 2) HOW TO EXPRESS PARTS NUMBERS OF STANDARD PARTS

■ RESISTOR



Symbol	Part Name
C	COMP.R
D	C R
S	CH MG R

Symbol	Rated Power
0 1	1 w
1 2	1/2 w
1 4	1/4 w
1 6	1/6 w
1 8	1/8 w

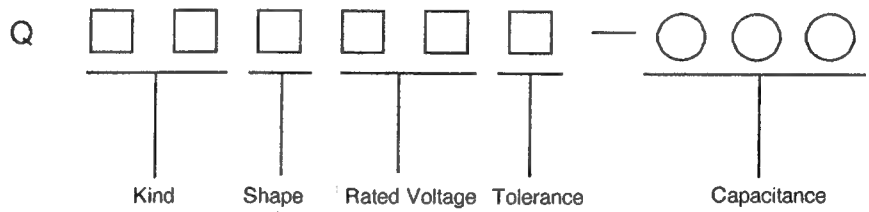
Symbol	Shape
1	Straight lead
8	Chip

Indicate with first two-figure expressed by Ω and following 0.
please note that,in case of resistance less than 10 Ω, a letter "R"will be effective as point.

EX.

2.2 Ω	=			2R2
470 Ω	=	47×10^{1}	→	471
150kΩ	=	15×10^{4}	→	154

■ CAPACITOR



Symbol	Part Name
CS	C CAP.
CS	CH C CAP.
ET	E CAP.
FM	M CAP.

5Figure / 6Figure	0	1	2
A		10V	100V
C		16V	160V
D			200V
E		25V	250V
H		50V	500V
J	6.3V	63V	
V		35V	

Indicate with first two-figure expressed by pF and following 0.
Please note that,in case of capacitance less than 10 pF a letter "R" will be effective as point.

EX

5pF	=			5R0
1000pF	=	10×10^{2}	→	102
47μF	=	47×10^{6}	→	476

Symbol	Shape
1	Straight lead
1	Leads in the same direction
8	Chip
A	Leads in the same direction (compact part)

MODULE P.C BOARD PARTS LIST

The following module pc boards are supplied as assemblies.
The component parts on the module PC boards are available only when the parts are listed in the "MODULE PRINTED CIRCUIT BOARD PARTS LIST."

SECAM MODULE PC BOARD Ass'y (SBY-S001A)
S.SELECT MODULE PC BOARD Ass'y (SBY-M003A)
IF MODULE PC BOARD Ass'y (SBY-F501A)
DL APACON MODULE PC BOARD Ass'y (SBY-D002A)
EQUALIZER MODULE PC BOARD Ass'y (SBX-E001A)

JVC AV-S290M SCHEMATIC DIAGRAM

■ NOTICE

○ Voltage values and waveforms are measured by respectively receiving and displaying on the screen the colour bars signals of the PAL, SECAM, and NTSC (3.58MHz/4.43MHz).
The voltage values indicated within the circuits denote those obtained when PAL colour bar signals are received and displayed on the screen. However, as for those points where the voltage values are caused to vary by input signals (SECAM, NTSC); discrimination is effected by indicating as per an example [Example: (4.2V)].

○ The voltage values when receiving and displaying the PAL signal on the screen and the each mode values of the VSM & AUDIO STATUS are varied is shown in the LIST on page ② (⇨Difference voltage list).
Multimeter used.
DC 20kΩ/V
Given figures are all DC voltages.
Sweep speed of oscilloscope
H→20μS/div. V→5mS/div.
Others—sweep speed specified

○ Since the schematic diagram is a standard one, the circuit and circuit constants may be subject to change for improvement without any notice.

■ SAFETY

FR (–WV–FR) denotes a fusible resistor which operates as a fuse. When replacing fusible resistors and parts indicated with black shading (▬) in the circuit diagrams, be sure to ensure safety by using designated parts.
As to other parts too, use designated parts to maintain safety and performance.

NOTE FOR SERVICE

This model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (primary: ⊥) side GND and the NEUTRAL (secondary: ⏚) side GND.
Don't short between the LIVE side GND and NEUTRAL side GND or never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND at the same time.
If above note will not be kept, a fuse or any parts will be broken.

■ INDICATION OF PARTS SYMBOL

Inside board (Example) SBY- 1252A: R1209→R209
Outside board (Example) R0001→R01

■ SCHEMATIC DIAGRAM INDICATION

Resistor

○ Resistance value
Without unit : [Ω] K : [kΩ] M : [MΩ]
○ Rated allowable power
Without indication : 1/6W
* Others Indicated
○ Type
Without indication : Carbon resistor
OMR : Oxide metal film resistor
UNFR : Unflammable resistor
MFR : Metal film resistor
MPR : Metal plate resistor
FR : Fusible resistor
* Composition resistor 1/2 [W] is indicated as 1/2S or Comp.

Capacitor

○ Capacitance
Above 1 [pF] Below 1 [μF]
○ Withstnad voltage
Without indication : DC 50 [V]
Others : DC withstand voltage [V]
AC indicated : AC withstand voltage [V]
○ Indications for electrolitic capacitors are as follows.
(Example)
47/50→capacitance [μF] /withstand voltage [V]
○ Type
Without indication : Ceramic capacitor
MY : Mylar capacitor
MM : Metalized mylar capacitor
PP : Polypropylene capacitor
MPP : Metalized polypropylene capacitor
MF : Metalized film capacitor
BP : Bipolar electrolytic capacitor
TAN. : Tantalum capacitor

Coil

Without unit : [μH]

Connection method

▭ : Connector
→⊣ : Receptacle
○ ○ : Wrapping or soldering

Power Supply

▬▬ : B_1(115V) ▬▬ : B_2(12V)
▬▭▬▭ : 9V ▭▭▭ : 5V

* Each voltage reading specified

Test point & GND. symbol.

◉ : Test point by miniature GT pin
○ : Only test point display
⊥ : Live (Primary) side ground
⏚ : Neutral (Secondary) side ground
